

Generating and distributing energy emits greenhouse gases that contribute to climate change. California is working to achieve 100% clean electricity and carbon neutrality by mid-century or earlier. Choices you make about appliances and your energy use and supply can make a difference in reaching these goals.

Join the Clean Energy Party

- Use LED lights, power strips, and ENERGY
 STAR appliances; seasonally adjust your
 thermostat, and unplug unused devices
 (reducing up to 1.2 tons of your household's
 annual carbon dioxide emissions) (Cool
 California).
- Learn about local clean power options (CEC).
- Install solar energy on your home (Cool California).
- Avoid performing energy-intensive activities from 4-9 pm (Cool California).

Did you know

In 2019, 63% of California's electricity came from non-fossil fuel sources. (CEC)

LED lights are 75% more efficient and last 25 times as long as traditional incandescent lightbulbs. (CEC)

Learn more by doing a personal energy audit and accessing energy conservation tips (Cool California).

Be a part of California's climate action by volunteering to raise awareness of clean energy solutions (CCAC Volunteer Hub).

Help California achieve its clean energy goals by sharing these tips with 5 of your friends, family members, or neighbors.
